

Common Report Engine (CRE) infrastructure upgrade

Related Eurex Circulars: 129/2016

Contact: Technology@eex.com

To provide additional storage capacity for future usage and for the implementation of additional security measures, Deutsche Börse is upgrading the Common Report Engine (CRE) infrastructure.

The new CRE infrastructure is available with immediate effect and can be used in parallel to the existing CRE infrastructure until April 14th. Following this transition period, the existing CRE infrastructure will no longer be accessible.

No changes are required for the CRE Regulatory Hub access as the necessary changes have already been implemented.

The new IP addresses to access the CRE are as follows:

Legacy CRE infrastructure			New CRE infrastructure			Port	
First	Second	Internet	First	Second	Internet	Public	Private
193.29.90.65	193.29.90.97	193.29.90.129	193.29.90.67	193.29.90.99	193.29.90.132	2221	2222

In order to use the new CRE infrastructure the new server host key must be accepted by all participants who are using a client. If a script is being used for the retrieval of files and reports the new server host key has to be included. All existing users and ssh key pairs remain unchanged and can also be used on the new CRE infrastructure.

A comprehensive description for accessing the CRE and the new server host key can be found in the CRE User Guide on the Eurex website www.eurexchange.com under:

Technology > Eurex Exchange's T7 > System documentation > Release 6.0 > Eurex Reports

Please note: The legacy CRE infrastructure will be discontinued from 14 April 2018 onwards and therefore all participants must have completed the migration to the new CRE infrastructure before this date.
